- Made in the USA.
- Sizes: XS-XXL, Talls & Shorts, Athletic Women's Plus, & Customs.
- All Options available

• **Materials:** Tough, military specification high tenacity, 210 denier High Count nylon, 210HC™. High Count nylon contains more threads woven into each square inch of fabric. The resulting fabric has a very tightly packed weave for extraordinary abrasion and puncture resistance, yet still light in weight.

• **Waterproof Coating:** The 210HC™ nylon is coated with Litec™ polyurethane on the inside to protect it from the scratches and punctures that occur on the outside of the fabric. The high molecular density Litec™ polyurethane has extremely good waterproofing and internal abrasion resistance qualities which allow OS SYSTEMS to reduce the bulk and weight of the polyurethane application. The resulting 210 HCLW fabric is extremely strong and durable, with substantially less weight.

• **Testing:** Each drysuit is individually tested under pressure and under water.

• **Warranty:** Two year limited warranty. See Warranty Page.
